

UE2 UE1 eNodeB MME

LTE eNodeB startup and UE setup (summary)

This sequence diagram describes how an eNodeB performs an S1 setup with the EPC and then initiates MIB and SIB broadcast to the UEs. The flow also shows how the eNodeB sends UE specific configuration information via the RRC Connection Setup message.

Click on message names in the sequence diagram to see field level details for individual messages.

UE2 UE1 eNodeB MME

LTE eNodeB startup and UE setup (detailed)

We will now analyze the complete flow with field level detail. Important parameters in each message are explained. You can also click on the message titles to see the complete structure of the messages.

1: S1-AP S1 Setup Request eNodeB initiates an S1 connection with the MME.

Global-eNB-ID:	Global eNodeB identifier
S1AP PLMN ID	PLMN id associated with the eNodeB
MCC	Mobile country code
MNC	Mobile network code
eNodeB Id	eNodeB id within the network
Supported Tracking Areas:	List of supported tracking areas in the eNodeB
Tracking Area [0]	
Tracking Area Code	Code assigned to the tracking area
Broadcast PLMNs:	List of PLMNs being broadcast from this eNodeB
{ PLMN Id1, MCC, MNC }	
{ PLMN Id2, MCC, MNC }	
DefaultPagingDRX	The default paging discontinuous transmission configuration

2: S1-AP S1 Setup Response The MME accepts the S1 connection

Served GUMMEIs Technology)	List of served GUMMEIs (One entry for each Radio Access Technology)
Served GUMMEI 0	LTE pool information is listed as the first entry
Served PLMN { PLMN Id, MCC, MNC }	PLMN being served
Served Group Id	MME Group identifier
Served MMECs	MME codes belonging to this group
MME Code	Identifies individual MMEs within the group
Relative MME Capacity	Relative processing capacity of an MME with respect to the other MMEs in the pool.

3: BCCH-BCH: MIB

Master Information Block carries PHY related information about the LTE cell. This information is essential for further decoding of the system information.

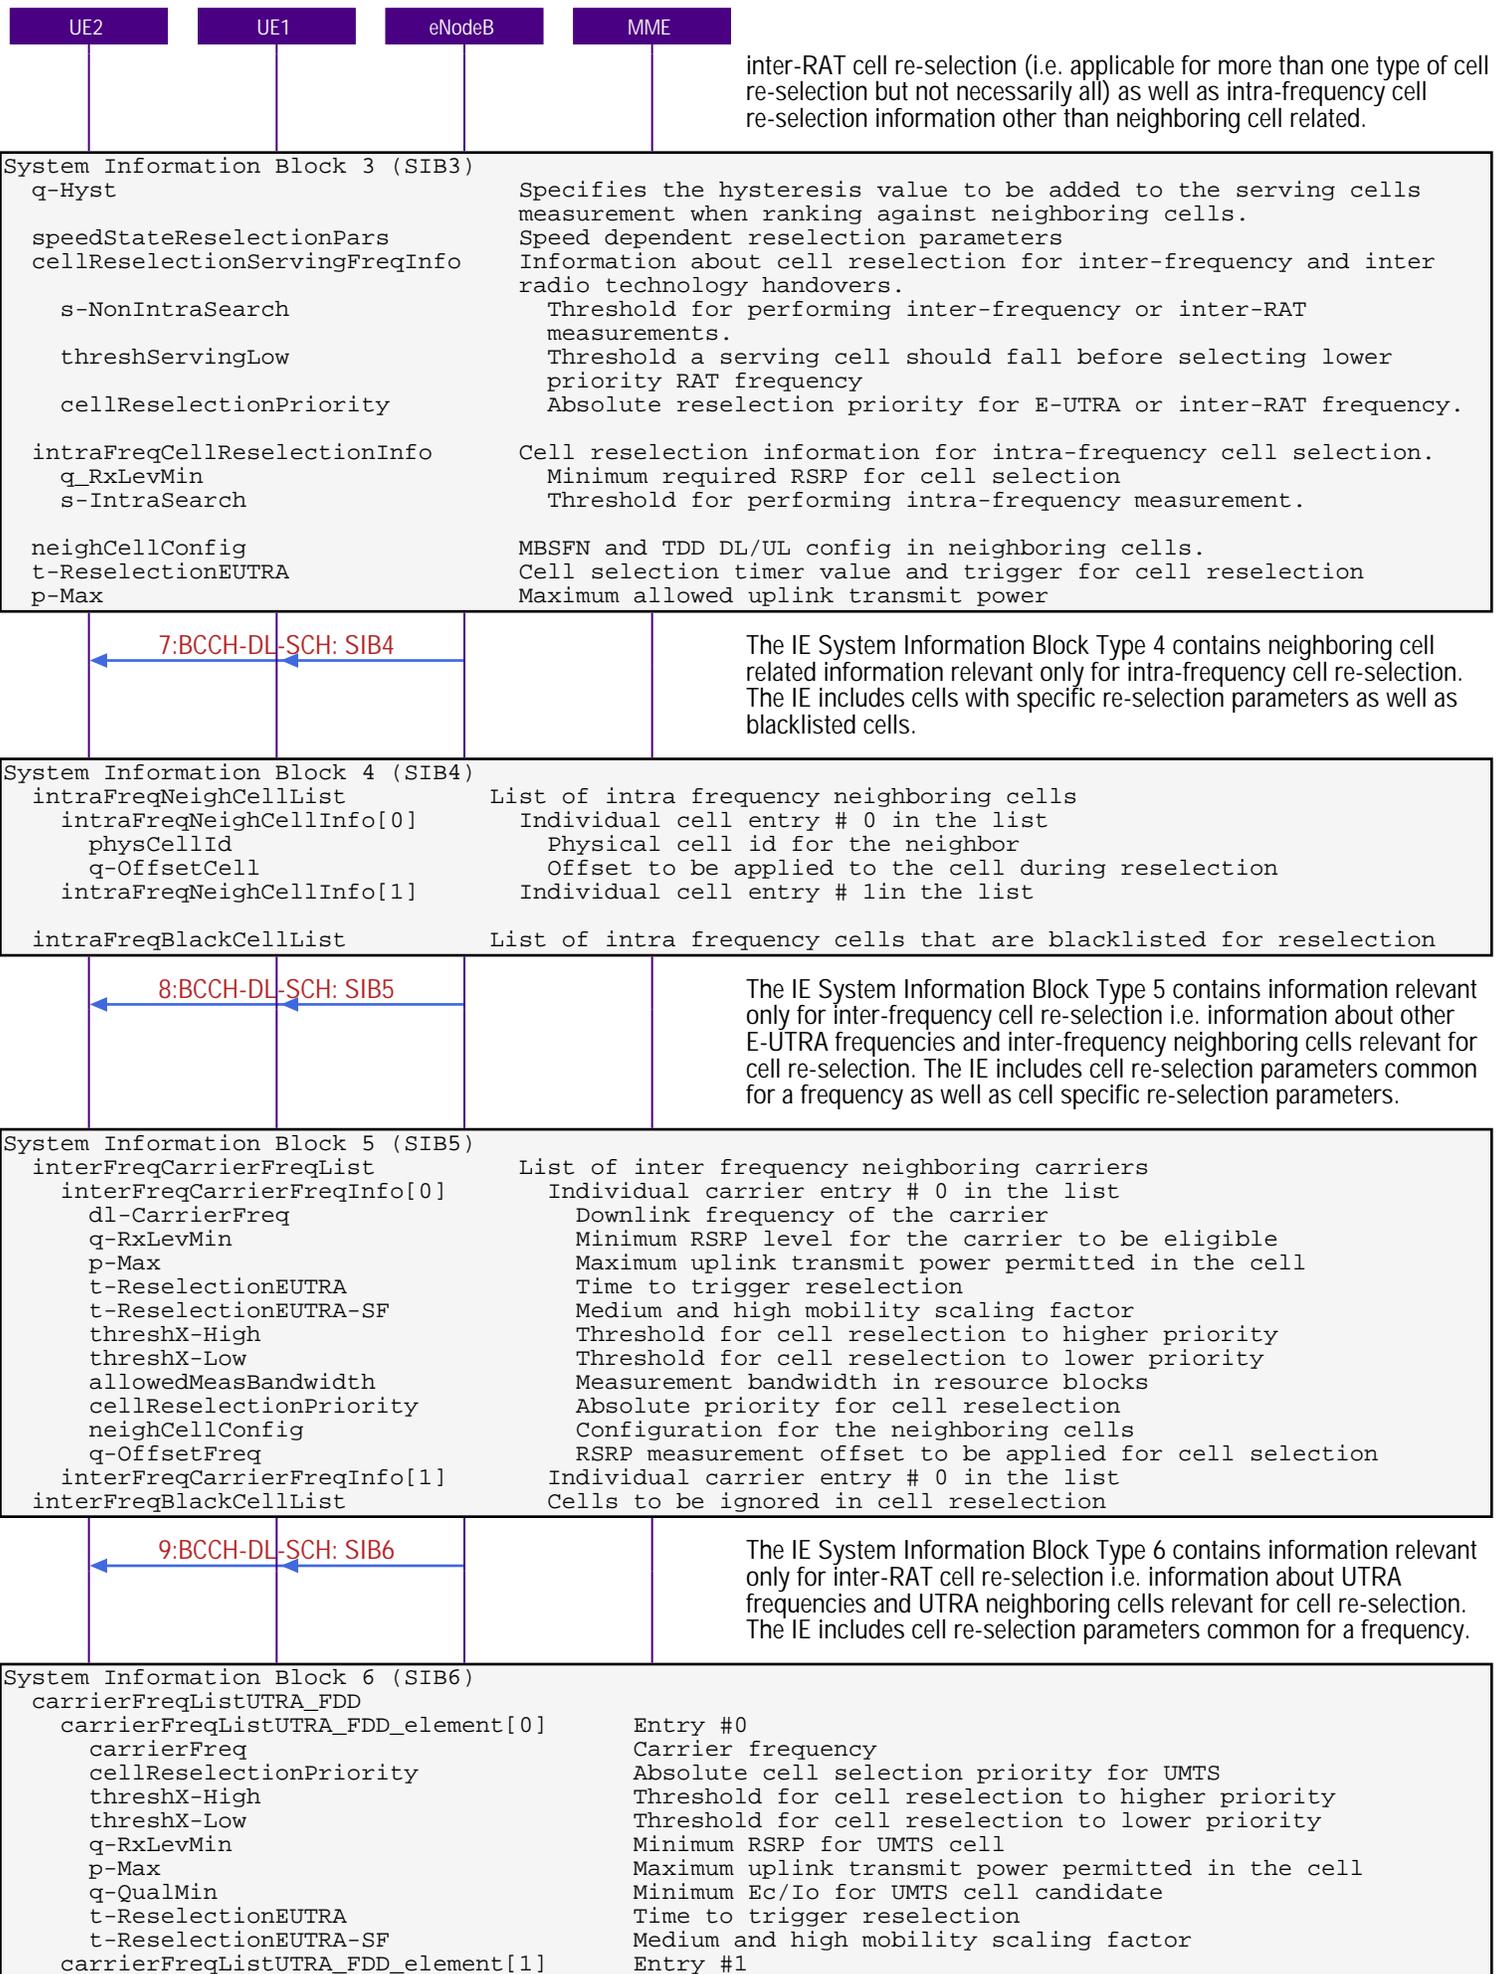

Master Information Block (MIB):	
Downlink Bandwidth	Downlink bandwidth for the cell
PHICH Configuration:	
PHICH Duration	Normal or extended PHICH
PHICH Resource	PHICH group value (Ng)
System Frame Number	Used to frame synchronize the UE
Scheduling Information for SIB1 BR R13 (PDSCH repetitions)	

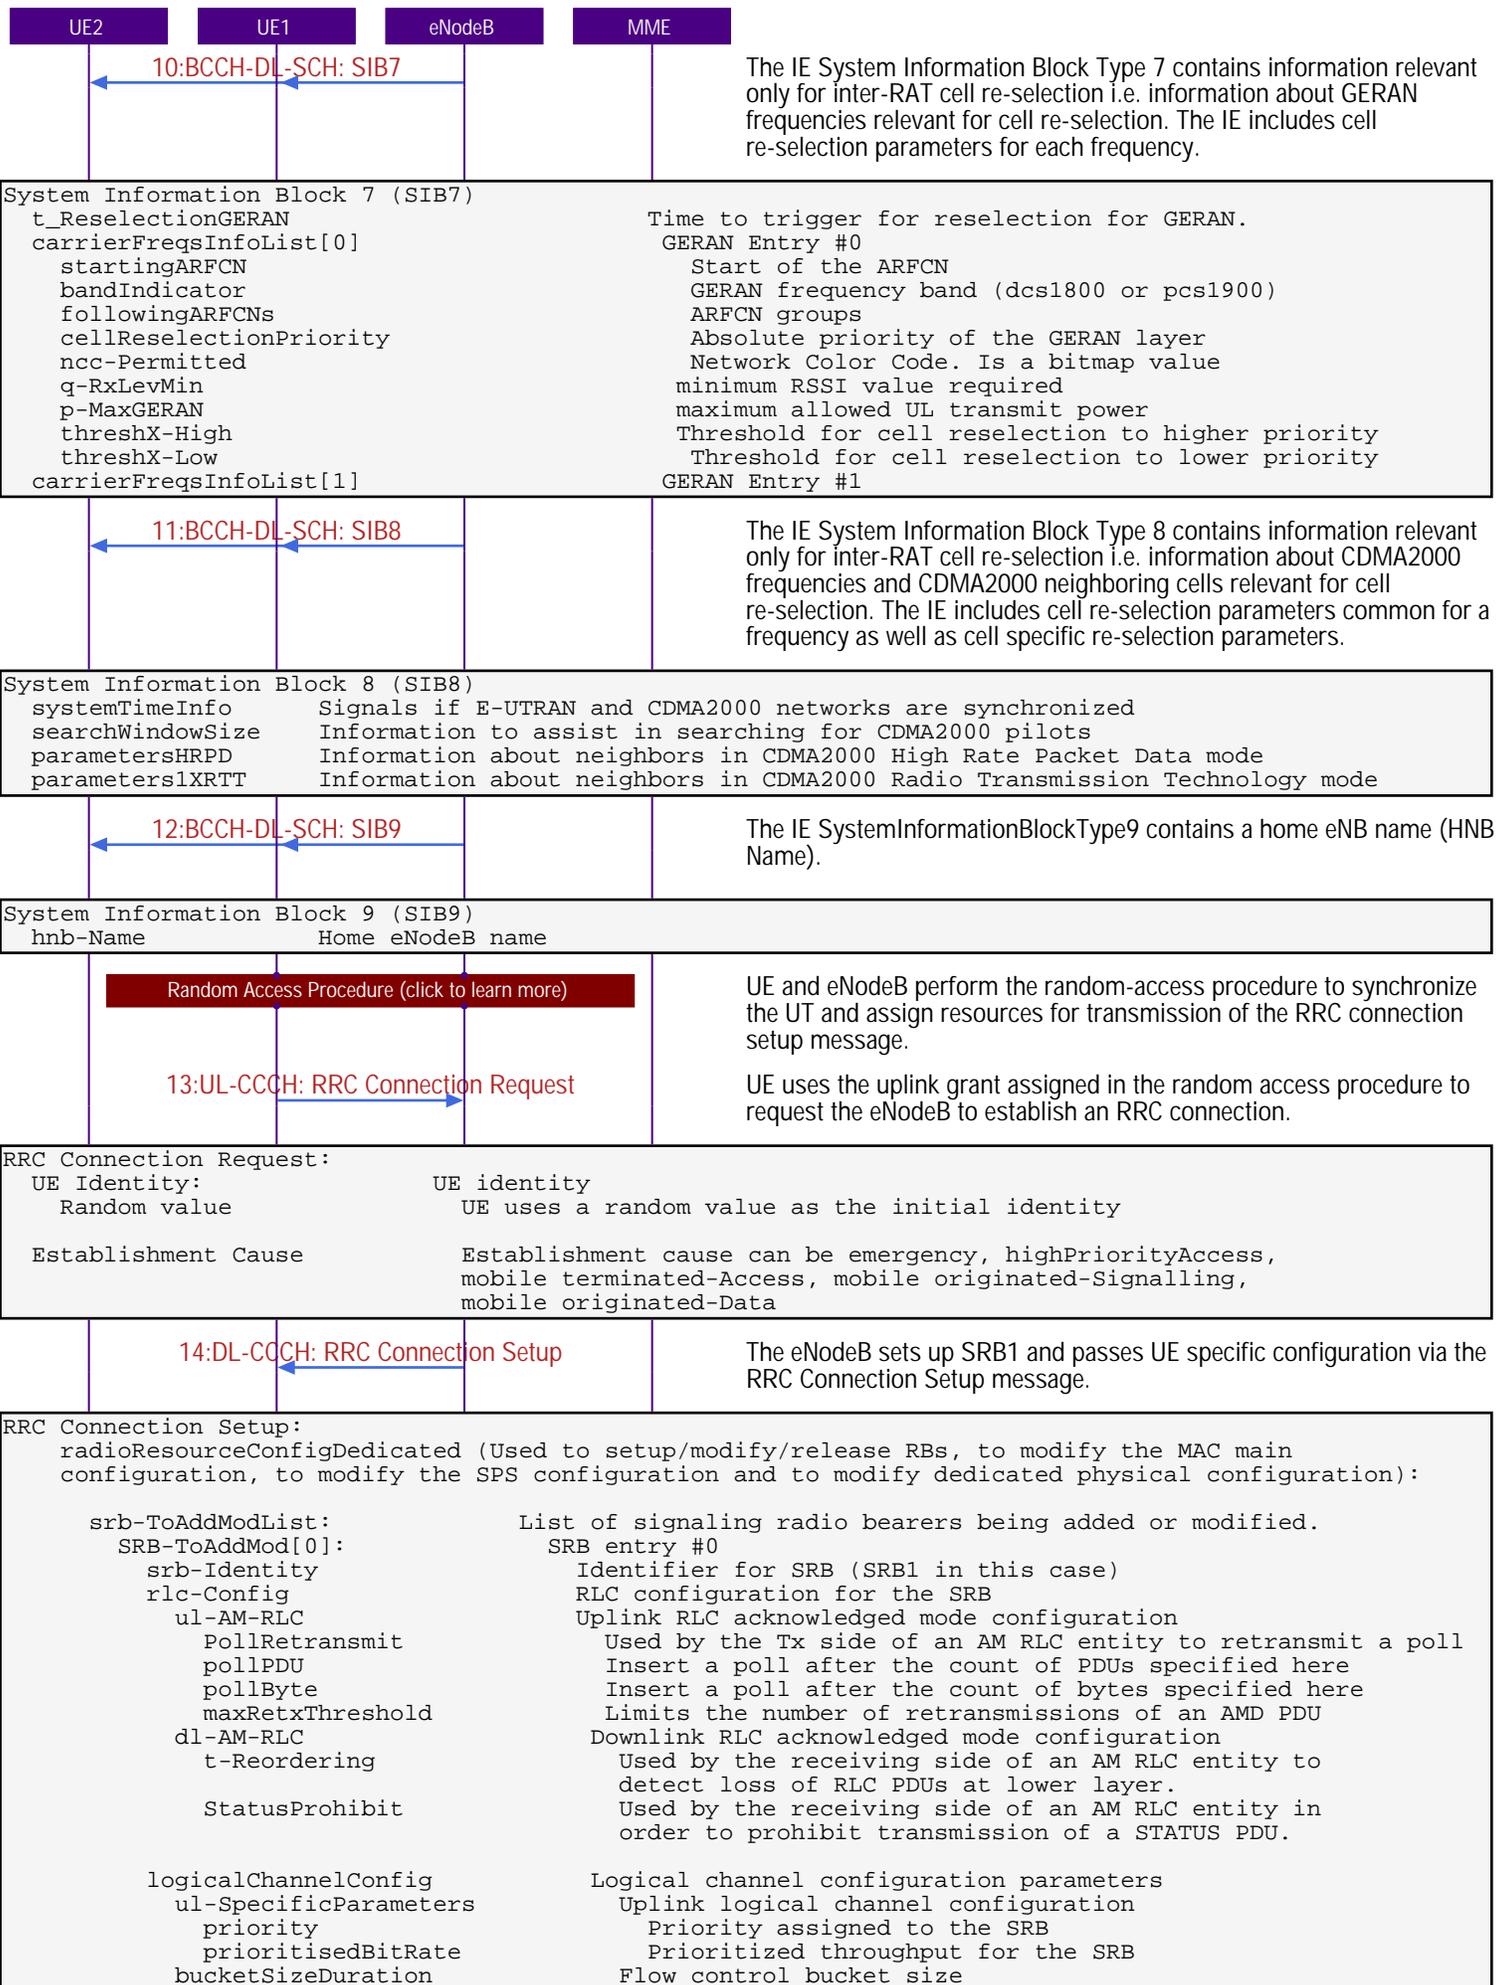

4: BCCH-DL-SCH: SIB1

System Information Block Type 1 contains information relevant when evaluating if a UE can access a cell and defines the scheduling of other system information.

System Information Block 1 (SIB):	
Cell Access Related Information:	
PLMN Identity List	List of PLMNs supported by this cell
{ PLMN Id1, MCC, MNC }	PLMN identifier, Mobile country code and network codes
{ PLMN Id2, MCC, MNC }	
Tracking Area Code	
Cell Barred Flag	
Cell Selection Information:	
q_RxLevMin	Minimum Required Signal Quality in the Cell
q_RxLevMinOffset	Adjustment applied to the minimum required signal quality in the search for a higher priority PLMN when the UT is camped on a VPLMN (Visited PLMN).
p-Max	Maximum UT power permitted in the cell
SI Scheduling Information List	Specifies the periodicity of SIB elements
Item 0:	
SI Periodicity: rf16 (16 frames)	
Mapping Information: {SIB3, SIB4}	
Item 1:	
SI Periodicity: rf32 (32 frames)	
Mapping Information: {SIB5}	
Item 2:	
SI Periodicity: rf64 (64 frames)	
Mapping Information: {SIB6, SIB7, SIB8, SIB9}	

UE2	UE1	eNodeB	MME
logicalChannelGroup		Backlog for the SRB will be signaled using this group	
physicalConfigDedicated (Used to specify the UE specific physical channel configuration):			
pdsch-ConfigDedicated		PD-SCH parameters being updated on a per UT basis	
p-a		Power offset between the Reference Signal and PDSCH channel in the symbols without reference signal.	
pucch-ConfigDedicated:		PUCCH parameters being updated on a per UT basis	
ackNackRepetition		Configuration for multiple transmission of HARQ ACK/NACK	
pusch-ConfigDedicated:			
betaOffset-ACK-Index		HARQ Ack offset signaled as an index	
betaOffset-RI-Index		RI offset signaled as an index	
betaOffset-CQI-Index		CQI offset signaled as an index	
uplinkPowerControlDedicated:		UE specific uplink power control parameters	
p0-UE-PUSCH		Used to determine nominal power for PUSCH transmission	
deltaMCS-Enabled		Power adjustment on basis of MCS	
accumulationEnabled		Are TPC commands accumulated?	
p0-UE-PUCCH		Used to determine nominal power for PUCCH transmission	
pSRS-Offset		Determines the Sounding Reference Signal power	
cqi-ReportConfig:		CQI configuration for the UE	
cqi-ReportModeAperiodic		CQI aperiodic mode configuration	
nomPDSCH-RS-EPRE-Offset		PDSCH to RS Energy per Resource Element (EPRE) offset	
cqi-ReportPeriodic		CQI periodic mode configuration	
soundingRS-UL-ConfigDedicated		SRS configuration for the UE	
antennaInfo:		Antenna configuration for the UE	
transmissionMode		Single antenna, diversity or MIMO mode selection	
schedulingRequestConfig		SRS configuration for the UE	

Attach and DRB setup (click to learn more)

The UE then proceed to attach and setup the default bearer.
